Append UTMs upon DOM change

Here is an example of snippet you can use to append UTMs upon a DOM change. This requires advance coding skills.

```
setTimeout(function(){
var target = document.querySelector('#storepoint-results')var observer = new
MutationObserver(function(mutations) {□console.log(jQuery(target).find('.storepoint-
onlinestore').length)
  if ( jQuery(target).find('.storepoint-onlinestore').length > 0 ){  □var a =
jQuery(target).find('.storepoint-onlinestore')
  □var target_url = a.attr('href') □var merged = jQuery.extend( {}, handl_utm,
getSearchParams(target_url) )
  □var src = target_url.split("?")[0];
  □if ( !jQuery.isEmptyObject(merged) ){   □var final_target = src + "?" +
jQuery.param(merged)
    }
    a.attr('href', final_target)
  }
});var config = { attributes: true, childList: true, characterData: true };
observer.observe(target, config);
 }, 500);
```
