

# Appending UTM Globally

**1. Click UTM, check the "Append UTM" box in the HandL Options tab and save changes**

The screenshot shows the WordPress dashboard with the 'HandL UTM Grabber' plugin settings. The left sidebar has 'UTM' highlighted. The main area has three tabs: 'HandL Options', 'Custom Fields', and 'WooCommerce Postback'. The 'HandL Options' tab is active, showing the 'Append UTM' checkbox checked and highlighted with a red box. Below it are fields for 'Zapier Webhook URL', 'Cookie Duration' (90 days), and 'Enable GDPR' (checked). A 'Save Changes' button is at the bottom.

**NOTE:** This may not work for some of the themes that are not using native `wp_content` filter. Or may not work for some of the Content builder plugin. If this method does not work, you can always append UTMs individually to your links and buttons using class variables `utm-out`. Please see [Appending UTMs to the buttons using class name attributes](#) for more.
