

# Appending UTMs using Shortcode

If none of the other proposed solutions here [How to Append UTM?](#) worked, you can always pull the UTM parameters using the shortcode.

For example

```
<a href="https://www.domain.com?utm_campaign=[utm_campaign]"></a>  
<div class="some-cool-div" data-  
url="https://www.domain.com?utm_campaign=[utm_campaign]"></div>
```
