

I'm using CloudFlare (CF)

Make sure the caching level is set as "Standard" shown in the image below

Caching Level

Determine how much of your website's static content you want Cloudflare to cache. Increased caching can speed up page load time.

No query string
 Ignore query string
 Standard

[API ▶](#) [Help ▼](#)

What are Cloudflare's [Caching Levels](#)?

You can set Cloudflare's CDN to cache [static content](#) according to these levels:

- **No Query String:** Only delivers files from cache when there is no query string.
- **Ignore Query String:** Delivers the same resource to everyone independent of the query string.
- **Standard:** Delivers a different resource each time the query string changes.

We recommend using the Standard level. [Learn more](#)

Note: By default, Cloudflare does not cache HTML content. You can create a Page Rule to [cache static HTML content](#).
