

Track and capture fbclid, _fbc and _fbp

Add fbclid, _fbc and _fbp as custom parameters under UTM menu

HandL Options	Custom Fields	Gravity Forms	Predefined Variables	WooCommerce Postback
Custom Param 1	<input type="text" value="_fbp"/>			
Custom Param 2	<input type="text" value="_fbc"/>			
Custom Param 3	<input type="text" value="fbclid"/>			

ad they will be tracked and captured just like any other UTM parameters. So easy... :)
