104.Changelog

What's updated in HandL UTM Grabber V3

- Development Log

Development Log

3.1.12 (August 30, 2025)

- Added auto-populate feature for **medium** and **source** (server and client side)
- Added **Facebook CAPI** integration for WPForms submissions
- Added support for **Yelp** as a traffic source

3.1.11 (July 16, 2025)

- Bug fixes and improvements on **Define your own** feature
- Added support for **Flamingo** with Contact Form 7 in analytics
- Added support for **WS Form** in analytics

3.1.10 (June 30, 2025)

- Refined UTM source detection by updating regex patterns to include domain-level checks, improving referral accuracy—now recognizes AI tools like `openai`, `Perplexity`, `Claude`, and `Gemini` as sources
- Improved how cookies are handled to boost compatibility and security across browsers
- Enhanced **Define your own** feature with dynamic value support—now allows combining static input with cookie-based values
- Resolved deprecated code issues and implemented various bug fixes and performance improvements

3.1.9 (June 15, 2025)

- Fixed a bug when removing conditions in "Define Your Own"
- Fixed an issue where enabling Full Tracking mode removed the Zapier webhook URL

3.1.8 (May 21, 2025)

- Expanded support for UTM tracking with new parameters: `wbraid` and `gbraid`
- Improved compatibility with WP REST API by allowing POST-based UTM tracking with cookie consent validation
- Refined subscription logic to better handle user signups via updated action hooks for MemberPress

3.1.7 (May 8, 2025)

- Enhanced AI-driven insights for improved reporting and decision-making
- Enhanced DYO logic management with new condition grouping and improved UI
- Added support for additional AI sources in UTM parameter handling

3.1.6 (Apr 7, 2025)

- AI-powered insight support for MemberPress

3.1.5 (Mar 26, 2025)

- AI-powered insight report fatal bug fix
- DYO bug fix

3.1.4 (Mar 26, 2025)

- Added full tracking mode for enhanced data collection capabilities (just like GA4).
- Complete revamp of AI-powered insights analytical functionality - Better UI!
- Updated DYO logic operators with 'defined' and 'not_defined' options for better condition handling.
- Improved traffic source detection by adding checks for fbclid and _fbc cookies.
- Refactored merge tag callback handling for Ninja Forms to ensure compatibility with version 3.9.2.

3.1.3 (Mar 18, 2025)

- Ninja Form - Merge Tag Hotfix

3.1.2 (Feb 24, 2025)

- New Onboarding experience
- Enhanced cookie management with the introduction of session cookies, allowing cookies to expire at the end of browser sessions
- Improved decoding and sanitization of URL parameters for better data integrity and security (Fixing potential XSS vuln).
- Added support for WooCommerce checkout blocks, improving integration with WooCommerce's latest features.

3.1.1 (Nov 12, 2024)

- Enhanced the license modal for better user interaction.
- Introduced an event dispatcher with `HandL-After-Main-Function` for custom event handling.
- Implemented the "Define Your Own" logic feature for custom UTM parameter manipulation.
- Added support for Ninja Forms by including form ID in data submissions (Zapier, Make).
- Expanded LatePoint compatibility by adding booking data form support.

3.1.0 (Sep 19, 2024) - Major Update for FB CAPI

- Integrated Facebook CAPI support for multiple platforms including WooCommerce, Gravity

Forms, Contact Form 7, Ninja Forms, Formidable Forms, Thrive Architect Forms, Fluent Forms, Elementor Forms.
