# Track UTMs in Amelia Booking

Make sure you create custom fields and embed them in your booking form. They must match to our naming convention here Native WP Shortcodes.

To hide the fields, use the following CSS rule:

Depending on the number of field you'd like to hide, change the number in the paranthesis. In our example, it is set for 4

```
.el-form-item.el-form-item--default.am-fs__info-form__item:nth-last-child(-n+4) {    display: none !important;
}
```

There is no other setup required for this to work :)
