Cookiebot (GDPR/CCPA Compliant Cookie Consent and Control) Integration

HandL UTM Grabber / Tracker How to collect and track UTM variables via Cookiebot step by step Cookiebot is a cloud-driven solution that automatically controls cookies and trackers, enabling full GDPR/ePrivacy and CCPA compliance for websites.

- Ensure UTM Grabber Waits for User Consent

Ensure UTM Grabber Waits for User Consent

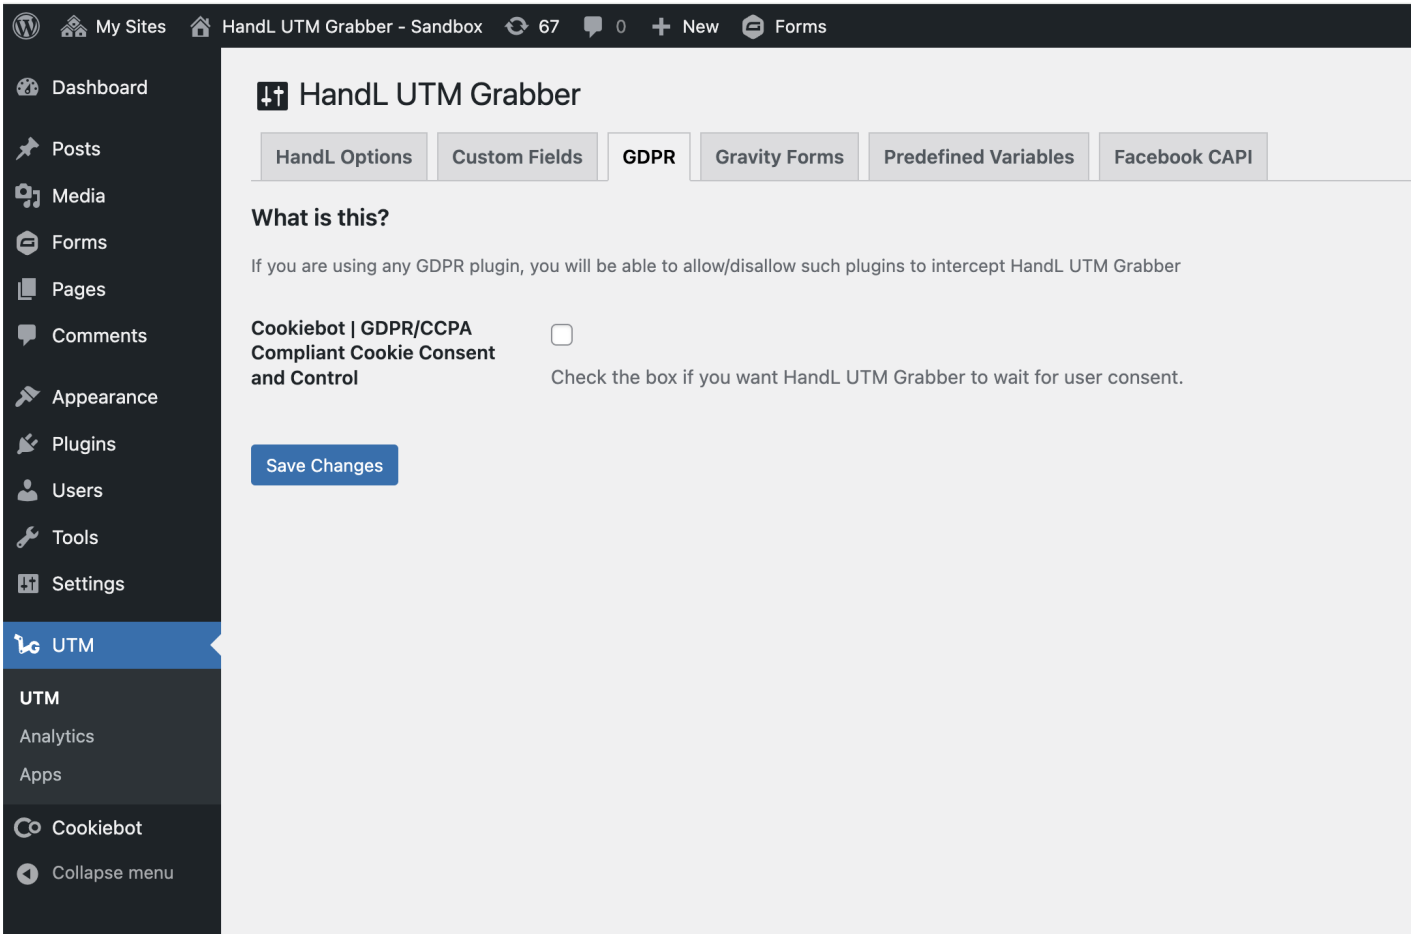

Our plugin functions by default. This implies that it essentially ignores the settings in Cookiebot and collects data, regardless of the consent status.

If you wish to collect data irrespective of consent, then there's no need to adjust any settings.

Only proceed if you want UTM Grabber to get consent before gathering data. Please be aware that enabling this feature could result in missing data for those who did not provide consent.

However, if you wish to alter this behavior, it can be done through settings. You simply need to navigate to UTM > GDPR and click on the Cookiebot | GDPR/CCPA Compliant Cookie Consent and Control checkbox. Once you've completed these steps, our plugin will monitor the consent and only collect data IF consent is given.

We use Cookiebot's native event listener, which means as soon as a user gives consent, we'll begin collecting data immediately without needing to reload the page.
