

Native Elementor Form Support

This is our preferred way of collecting UTMs into your Elementor Form.

First add your field just like any other field to your form

The screenshot shows the configuration interface for a form field named 'utm_campaign'. At the top, there is a header bar with the field name 'utm_campaign', a copy icon, and a close icon (X). Below this, there are two tabs: 'CONTENT' (which is active and highlighted in grey) and 'ADVANCED'. Under the 'CONTENT' tab, there are two settings: 'Type' is set to 'Hidden' (indicated by a dropdown arrow), and 'Label' is set to 'utm_campaign'. Below the configuration area, there is a grey button with a plus sign and the text '+ ADD ITEM'.

Go to Advanced and select "parameters" under HandL UTM Grabber menu

The image shows a web form titled 'utm_campaign'. It has two tabs: 'CONTENT' and 'ADVANCED', with 'ADVANCED' being the active tab. Below the tabs is a 'Default Value' input field. To the left of the main form is a sidebar menu with the following items: '> Shortcode', '> User Info', '**Media**', '> Featured Image Data', '**Author**', '> Author Info', '> Author Meta', '> Author Name', '**Comments**', '> Comments Number', '**HandL UTM Grabber**', and '> Parameters'. The 'Parameters' item is highlighted with a blue bar.

Click parameter and enter the parameter name you want to track into the form field

This image shows the same 'utm_campaign' form, but with a 'Parameters' dialog box open. The dialog has a 'Settings' section with a 'Parameter' label and a text input field containing 'utm_campaign'. Below the input field is an 'Advanced' section with a right-pointing arrow. In the background, the 'ADVANCED' tab is still active, and a 'Parameters' button with a wrench icon is visible next to the 'Default Value' field.

That's it!
