

Iframe integration

HandL UTM Grabber integrates with Form Titan with only couple of clicks.

First of all, make sure you added all the utm values as utm_campaign, utm_source, utm_medium, utm_term, utm_content as static variables like the shown below:

Make sure the names exactl matches with our naming convention shown here [Native WP](#)

[Shortcodes](#)

The screenshot shows the 'Custom Variables' interface in Form Titan. The 'Static' tab is selected, showing a list of 8 variables. Each variable has a name, a default value, and a message icon.

Name	Default Value
utm_source	Default Value
utm_campaign	Default Value
utm_term	Default Value
utm_content	Default Value
utm_medium	Default Value
traffic_source	Default Value
organic_source_str	Default Value
submission_id	Default Value

After that Publish your change and grab the iframe code and paste it into your post:

If you are implementing using the iframe code, your code will look like this.

```
<iframe onload="window.parent.scrollTo(0,0)" id="ft1302219221332-952-94"
allowtransparency="true" src="https://domain.formtitan.com/formname" frameborder="0"
width="1000" height="700" scrolling="no"></iframe>
```

Simply modify it to

```
<iframe onload="window.parent.scrollTo(0,0)" class="utm-src" id="ft1302219221332-952-94"
allowtransparency="true" src="https://domain.formtitan.com/formname" frameborder="0"
width="1000" height="700" scrolling="no"></iframe>
```

As you can see, we just added `class="utm-src"` to the iframe. Rest everything will work and your UTM fields will be auto populated.

After submission is completed: you will be able to use these System fields anywhere in your automation.

In submissions like this

The screenshot shows the 'Edit Node' interface of a workflow automation tool. It features a sidebar on the left with a list of actions: 'Store', 'Load', 'Delete', 'Create', and 'Update'. Below these is a dropdown menu labeled 'What would you like to store?' with 'On Page' selected. The main area displays a table with 6 rows of UTM parameters, each with a corresponding input field. The parameters are: [GV / utm_source], [GV / utm_campaign], [GV / utm_term], [GV / utm_content], [GV / utm_medium], and [GV / traffic_source]. A 'Next' button is located at the bottom center.
