

Formstack Forms

HandL UTM Grabber / Tracker How to collect and track UTM variables via Formstack Forms step by step

- [Capture UTMs using Formstack forms](#)
- [Capture UTMs using Formstack forms \(V4\) - Old](#)
- [Capture UTMs using Formstack forms \(V4\)](#)

Capture UTMs using Formstack forms

This form only works in HandL UTM Grabber V3

Add the hidden fields as follows. Make sure the hidden field name (either field label or placeholder exactly matches with our naming convention here [Native WP Shortcodes](#))

The screenshot shows the Formstack form builder interface. On the left is a sidebar with a 'Logic' section and a 'General' section. The 'General' section includes fields for 'FIELD LABEL', 'SUPPORTING TEXT', 'PLACEHOLDER', and 'FIELD SIZE'. The 'FIELD LABEL' and 'SUPPORTING TEXT' fields are both set to 'utm_campaign'. The 'FIELD SIZE' section has 'Minimum Characters' and 'Maximum Characters' both set to 0. The 'Field-Specific' section has 'Link to Smart List' selected. The main area shows a form titled 'Sign up for our newsletter!' with a supporting text 'Fill out your information below to be signed up for our informative newsletter.' Below this are input fields for 'Name' and 'Email'. At the bottom, there are four hidden fields: 'utm_campaign', 'utm_source', 'utm_medium', and 'organic_source_str'. Each hidden field has a label and a placeholder, both matching the field name.

After activating the plugin, insert the following code in your custom javascript file:

```
function FF_OnAfterRender(){
  console.log("Form rendered successfully!");
  var vars =
    ["Lead.UTM_Campaign__c", "Lead.UTM_Medium__c", "Lead.UTM_Source__c", "Lead.UTM_Term__c", "Lead.UTM_
  for (v of vars){
    escape_v = v.replace(/\.\/g, '\\.\\.')
    jQuery("#"+escape_v).val(Cookies.get(v));
  }
```

```
[]}  
[]return true;  
}
```

And the fields will be automatically populated after lead is submitted.

1 field was not displayed

Capture UTMs using Formstack forms (V4) - Old

This form is only compatible with HandL UTM Grabber V3.

Please add the hidden fields as outlined below. Ensure that the hidden field name (either the field label or placeholder) exactly matches our naming convention detailed here: [Native WP Shortcodes](#).

The screenshot displays the Formstack V4 form builder interface. The top navigation bar includes tabs for Forms, Uncategorized, and a specific form named 'handl'. The main interface is divided into a left sidebar and a central canvas.

Left Sidebar:

- Logic:** A section for configuring form logic.
- General:** A section for general field settings.
 - FIELD LABEL:** A text input field containing 'utm_campaign'.
 - SUPPORTING TEXT:** A text input field containing 'utm_campaign'.
 - Use Callout:** A checkbox that is unchecked.
 - PLACEHOLDER:** A text input field containing 'utm_campaign'.
 - Required:** A checkbox that is unchecked.
 - Read-only:** A checkbox that is unchecked.
 - Hide Label:** A checkbox that is unchecked.
 - Hidden:** A checkbox that is checked.
 - Unique:** A checkbox that is unchecked.
- Field-Specific:** A section for field-specific settings.
 - Create Custom List:** A radio button that is unchecked.
 - Link to Smart List:** A radio button that is checked.
 - Select Smart List to Link:** A dropdown menu with the text '-- Select Smart List to Link --'.
 - Autocomplete Editor:** A button to open the autocomplete editor.
 - FIELD SIZE:** A section for field size settings.
 - Minimum Characters:** A text input field containing '0'.
 - Maximum Characters:** A text input field containing '0'.

Central Canvas:

- The canvas shows a form titled 'Sign up for our newsletter!'.
- Below the title is a text input field with the placeholder 'Fill out your information below to be signed up for our informative newsletter.'
- There are two required fields: 'Name' and 'Email'.
- Below these are four hidden fields, each with a 'Hidden' label and a 'utm_' prefix:
 - utm_campaign:** A text input field with the placeholder 'utm_campaign'.
 - utm_source:** A text input field with the placeholder 'utm_source'.
 - utm_medium:** A text input field with the placeholder 'utm_medium'.
 - organic_source_str:** A text input field with the placeholder 'organic_source_str'.

As of version 3.0.59, you do not need to perform any additional steps, as Formstack V4 is natively supported.

If you are using HandL UTM Grabber 3.0.58 and below. Then proceed with the following step:

Upon activating the UTM Grabber V3 plugin, insert the following code into your custom JavaScript file:

```
setTimeout(function(){
    handl_utm_all_params.map(function(v){      var element = document.querySelector('.fsForm
[placeholder="'+v+'"'])
        if (element){
            var curVal = Cookies.get(v) ?? "";          var event = new Event('input', {
bubbles: true })
            var previousValue = element.value
            element.value = curVal
            element._valueTracker.setValue(previousValue)
        element.dispatchEvent(event)
        }
    })
}, 500)
```

This code will automatically populate the fields after a lead is submitted.

1 field was not displayed

Capture UTMs using Formstack forms (V4)

This form is only compatible with HandL UTM Grabber V3.

Please add the hidden fields as outlined below. Ensure that the hidden field name (either the field label or placeholder) exactly matches our naming convention detailed here: [Native WP Shortcodes](#).

The screenshot displays the Formstack Builder interface for a form titled "Sign up for our newsletter!". The left sidebar contains configuration options for the selected field, which is a "Short Answer" type. Under the "General" tab, the "FIELD LABEL" is set to "utm_campaign", the "SUPPORTING TEXT" is "utm_campaign", and the "PLACEHOLDER" is "utm_campaign". The "Hidden" checkbox is checked. Under the "Field-Specific" tab, the "Link to Smart List" option is selected. The main canvas shows the form layout with a title, a description, and several input fields. The first input field is for "Name", followed by "Email". Below these are four hidden fields, each with a label and a placeholder, all set to "utm_campaign": "Hidden utm_campaign", "Hidden utm_source", "Hidden utm_medium", and "Hidden organic_source_str".

Add `<Embed Code>` in FormStack at the top of your form and include the following script there. Make sure to replace `<FORM ID>` with your own form id

```
<script>
var form = window.fsApi().getForm(<FORM ID>);
form.registerFormEventListener({
  type: 'ready',
  onFormEvent: function (event) {
```

```

        if (window.handl_utm_all_params){
            handl_utm_all_params.map(function(v){
                var element =
document.querySelector('.fsForm [placeholder="'+v+'"]')
                if (element){
                    var curVal = Cookies.get(v);
                    if (curVal){
                        var field_id = element.getAttribute('data-fs-field-id');
                        var dest_field =
form.getField(field_id);
                        dest_field.setValue(curVal);
                    }
                }
            })
        }
        return Promise.resolve(event);
    }
});
</script>

```

This code will automatically populate the fields after a lead is submitted.
