

Capture UTMs using Formstack forms (V4) - Old

This form is only compatible with HandL UTM Grabber V3.

Please add the hidden fields as outlined below. Ensure that the hidden field name (either the field label or placeholder) exactly matches our naming convention detailed here: [Native WP Shortcodes](#).

The screenshot displays the Formstack V4 form builder interface. The top navigation bar includes tabs for Forms, Uncategorized, and a specific form named 'handl'. The main workspace shows a form titled 'Sign up for our newsletter!' with a description 'Fill out your information below to be signed up for our informative newsletter.' The form contains several input fields: 'Name', 'Email', and a 'utm_campaign' field. Below these, there are four hidden fields, each with a label and a placeholder: 'utm_campaign', 'utm_source', 'utm_medium', and 'organic_source_str'. The left sidebar contains a 'Logic' section with a 'General' tab and a 'Field-Specific' tab. The 'General' tab has options for 'FIELD LABEL', 'SUPPORTING TEXT', 'PLACEHOLDER', 'Use Callout', 'Required', 'Read-only', 'Hide Label', and 'Hidden'. The 'Field-Specific' tab has options for 'Create Custom List' and 'Link to Smart List'. The bottom of the sidebar shows 'FIELD SIZE' settings for 'Minimum Characters' and 'Maximum Characters'.

As of version 3.0.59, you do not need to perform any additional steps, as Formstack V4 is natively supported.

If you are using HandL UTM Grabber 3.0.58 and below. Then proceed with the following step:

Upon activating the UTM Grabber V3 plugin, insert the following code into your custom JavaScript file:

```
setTimeout(function(){
```

```

    handl_utm_all_params.map(function(v){      var element = document.querySelector('.fsForm
[placeholder="'+v+'"]')
    if (element){
        var curVal = Cookies.get(v) ?? "";      var event = new Event('input', {
bubbles: true })
        var previousValue = element.value
        element.value = curVal
        element._valueTracker.setValue(previousValue)
    element.dispatchEvent(event)
    }
    })
}, 500)

```

This code will automatically populate the fields after a lead is submitted.
