Capture UTMs using Formstack forms

This form only works in HandL UTM Grabber V3

Add the hidden fields as follows. Make sure the hidden field name (either field label or placeholder exactly matches with our naming convention here Native WP Shortcodes)

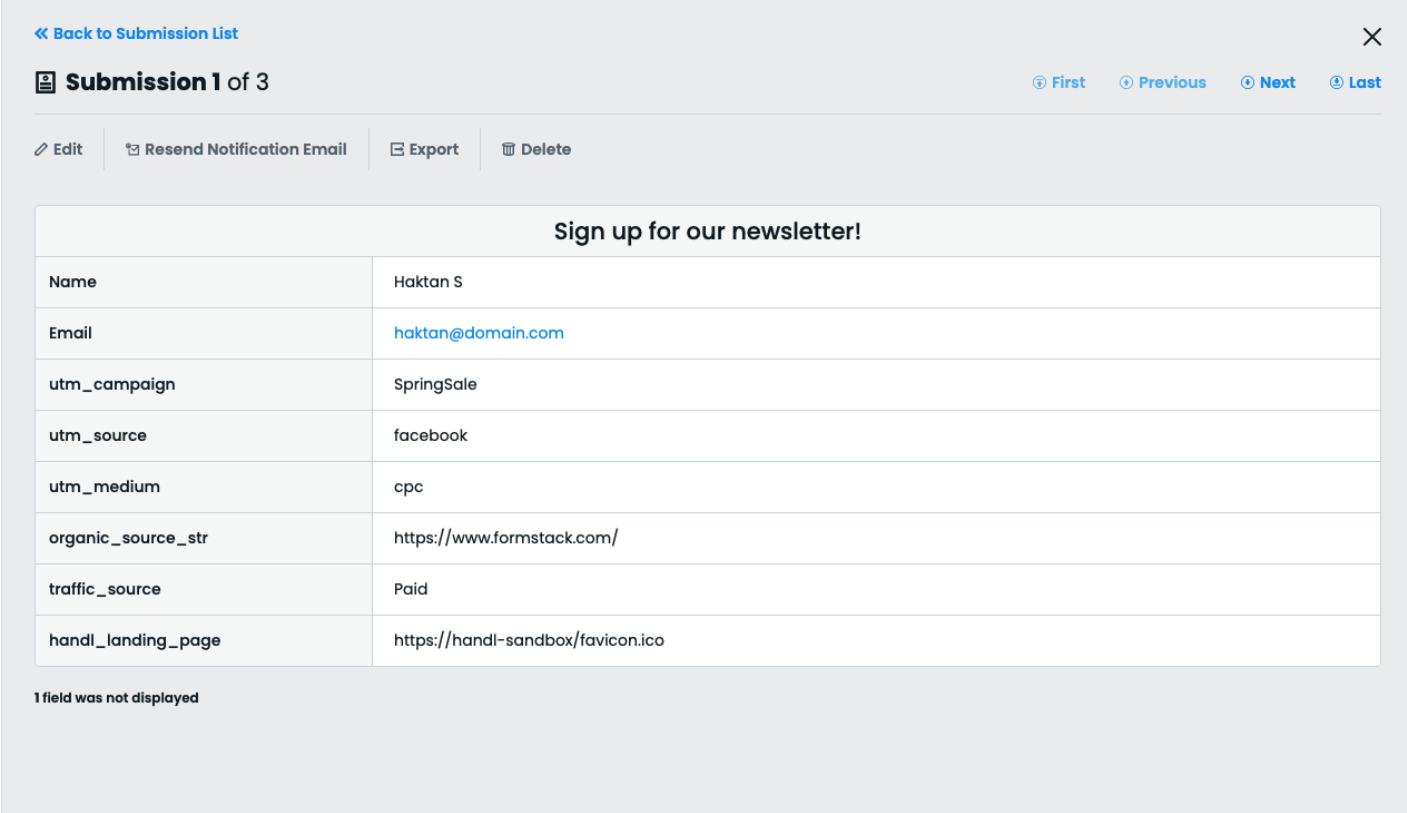

After activating the plugin, insert the following code in your custom javascript file:

```
function FF_OnAfterRender(){
	console.log("Form rendered successfully!");	var vars =
["Lead.UTM_Campaign__c","Lead.UTM_Medium__c","Lead.UTM_Source__c","Lead.UTM_Term__c","Lead.UTM_
	for (v of vars){
		escape_v = v.replace(/\./g, '\\.')
		jQuery("#"+escape_v).val(Cookies.get(v));
	}
```

```
return true;
}
```

And the fields will be automatically populated after lead is submitted.
