Track UTMs in JetForm Builder

This is only supported in V3 of the plugin...

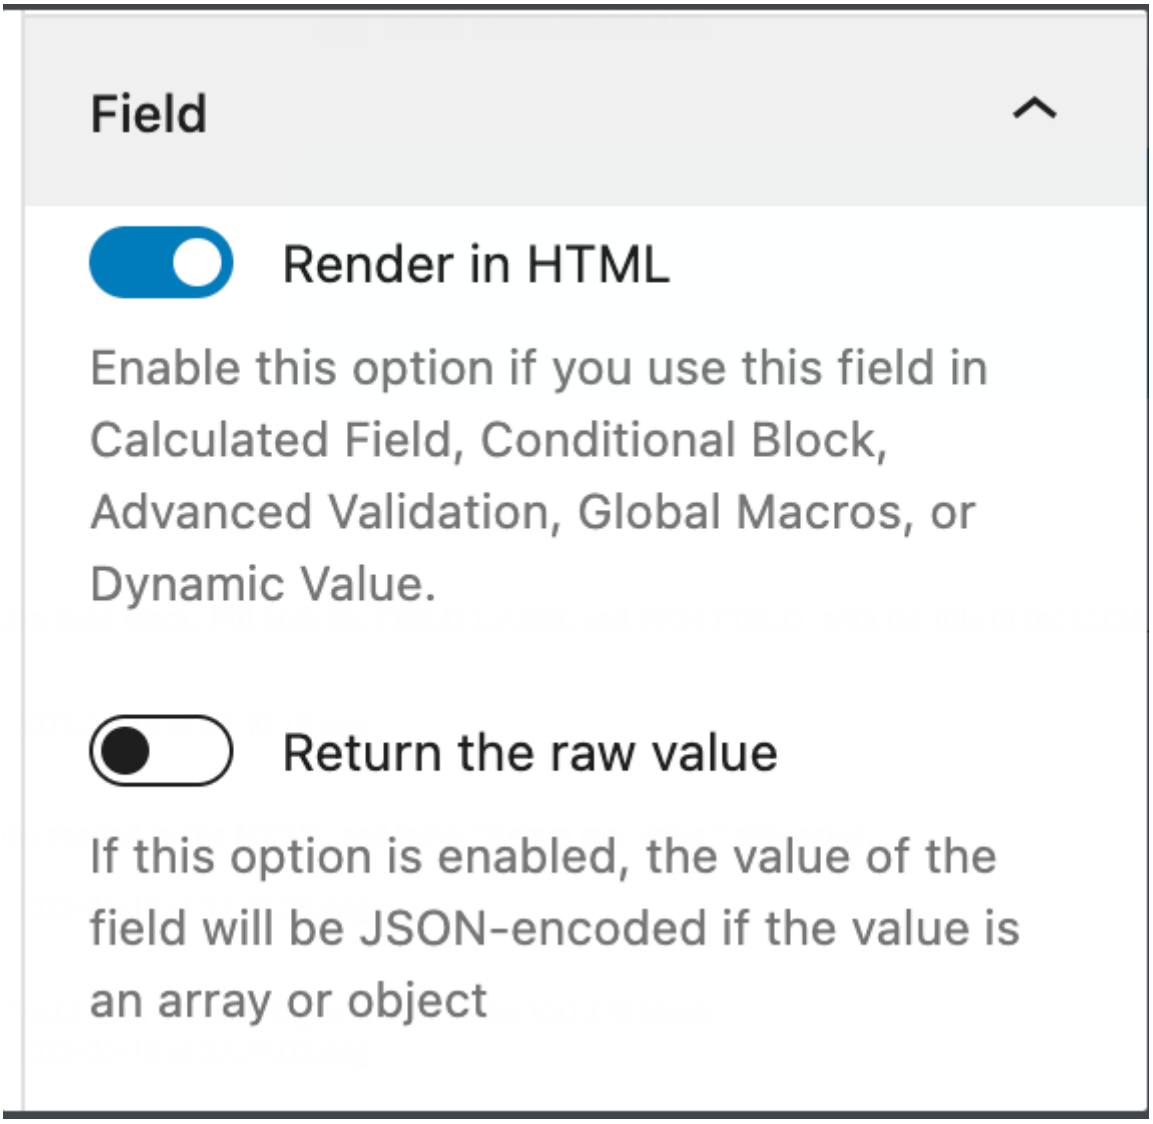

Setup is very easy.

Add a text field and match our naming conventions shown here. Native WP Shortcodes

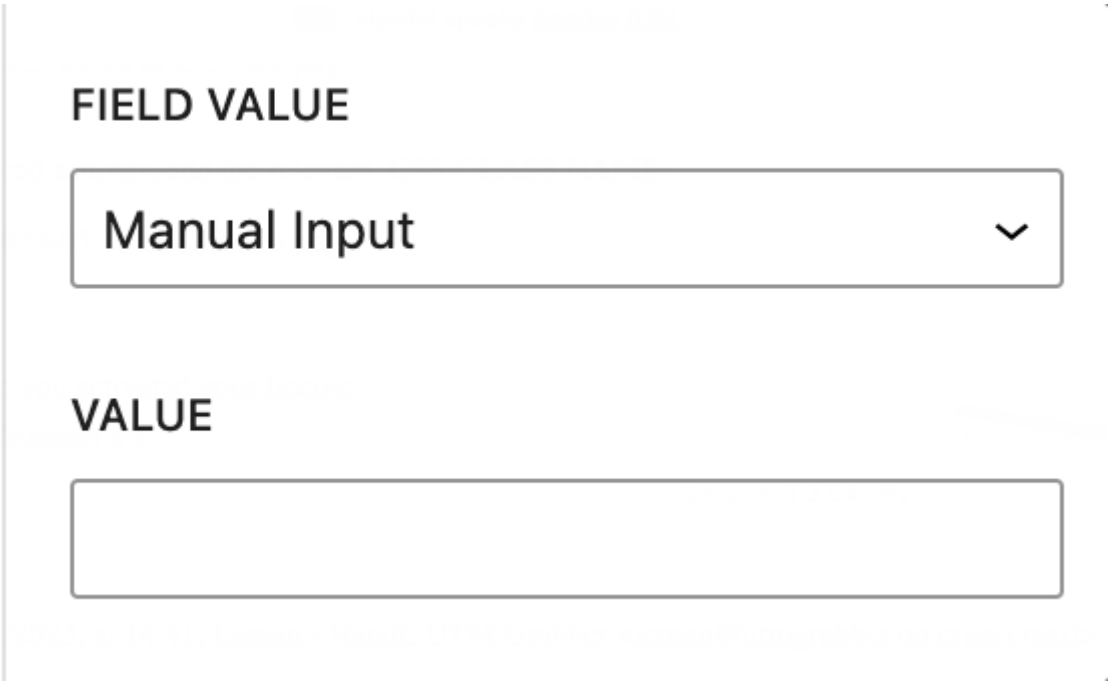

1. Add a Hidden field block. Fill both the FIELD LABEL and FRM FIELD with the title of the UTM parameter that you want to use.

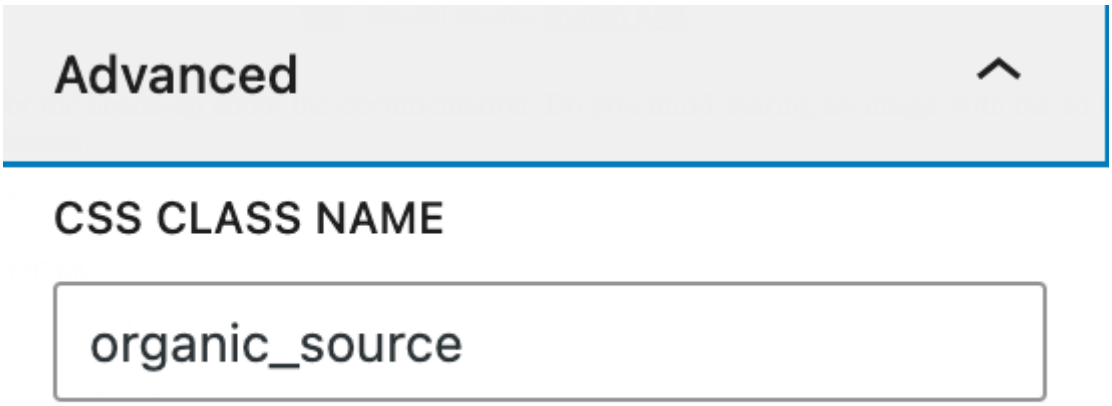

2. Toggle on the rended in the HTML and leave "Return raw value" untoggled.

3. Set FIELD VALUE to Manual input and leave the VALUE blank.

4. Under advanced settings, add the relevant CSS CLASS NAME

5. Save and test.
