Tracking UTMs in Logiform for embedded

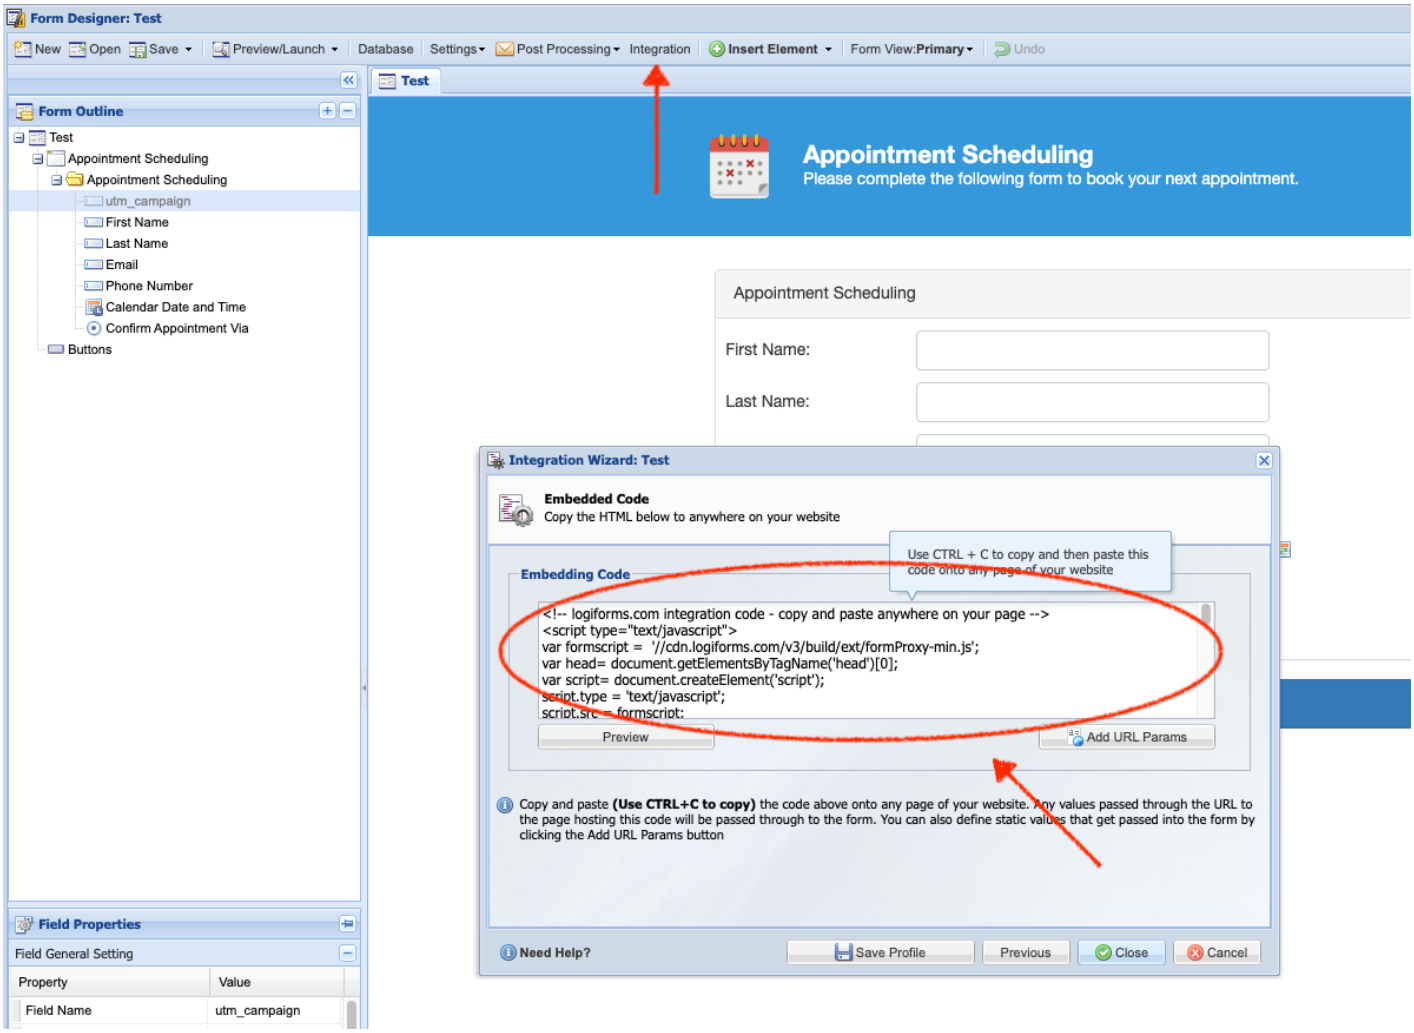

Create custom text fields and make them hidden.

Here we show it for `utm_campaign`. However, your can track any parameters listed here Native WP Shortcodes

Make sure field name matches to our naming convention here Native WP Shortcodes

Export the embed code

Before we place the code into our website, we'll make one modification in the embed code. It is the `params` field, please see it below.

```
params□□□□: decodeURIComponent(jQuery.param(handl_utm)),
```

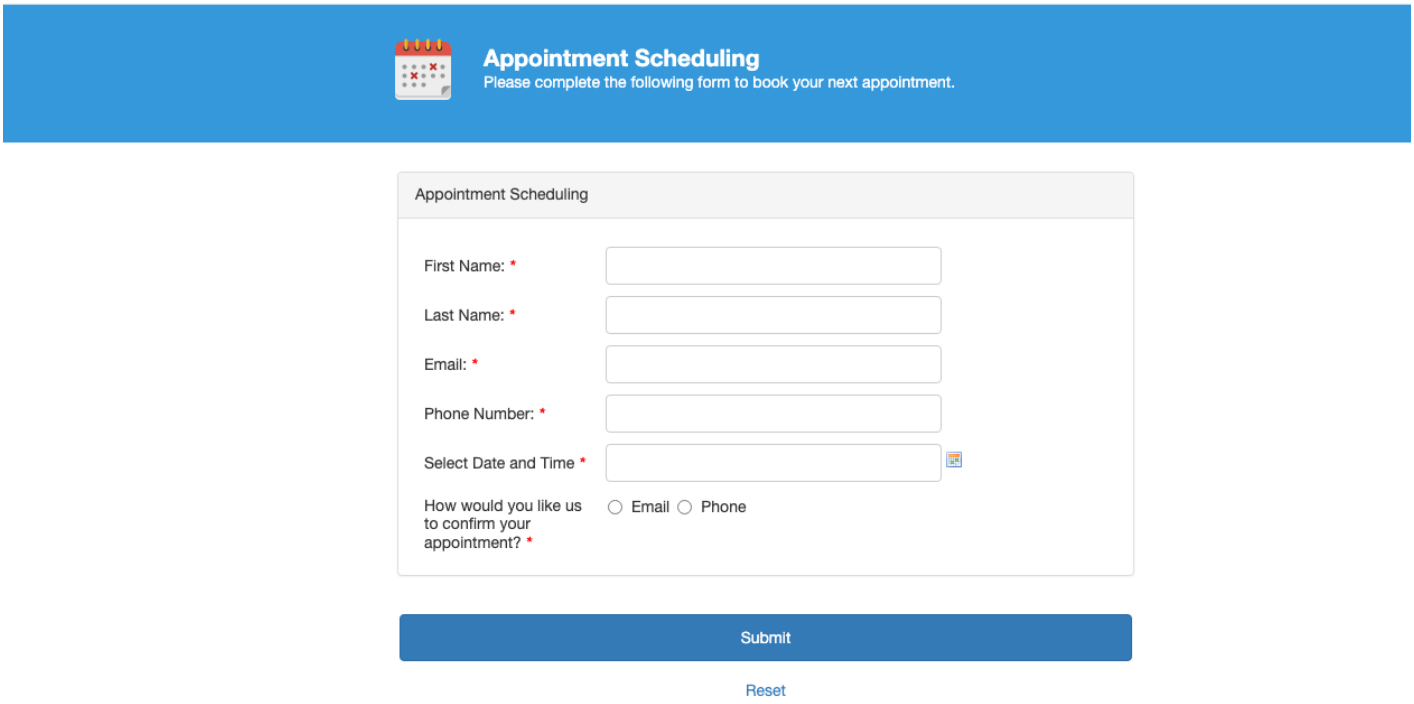

```
<!-- logiforms.com integration code - copy and paste anywhere on your page --><script
type="text/javascript">var formscript =  '//cdn.logiforms.com/v3/build/ext/formProxy-min.js';
var head= document.getElementsByTagName('head')[0];var script=
document.createElement('script');
script.type = 'text/javascript';
script.src = formscript;
head.appendChild(script);
window.formproxyS2=true;
window.addForm = function(){
FormProxy = new FormProxy({
□// user editable
□resizeOnDemand□□: true,
```

```
   scrollTop           : true,
□height□□□: 500,
□width□□□: '100%',
□scrolling□□: 'no',
□marginWidth□□: 0,
□marginHeight□□: 0,
□frameborder□□: 0,
□vspace□□□: 2,
□hspace□□□: 2,
□params□□□: decodeURIComponent(jQuery.param(handl_utm)),
□// system properties
   cookieRedirect      : false,
   formviewid          : 0,
□hid□□□□: 393948,
□fid□□□□: 86172,
□eid□□□□: 80784,
□eid2□□□: 21,
□secureform□□: 0,
□rootformurl□□: 'https://forms.logiforms.com/',
□mode□□□: 'standard',
□target□□□: 'lfform-placeholder'
});
}
</script>
<div id="lfform-placeholder"></div>
<!-- end logiforms.com integration code -->
```

Embed the code in your WP

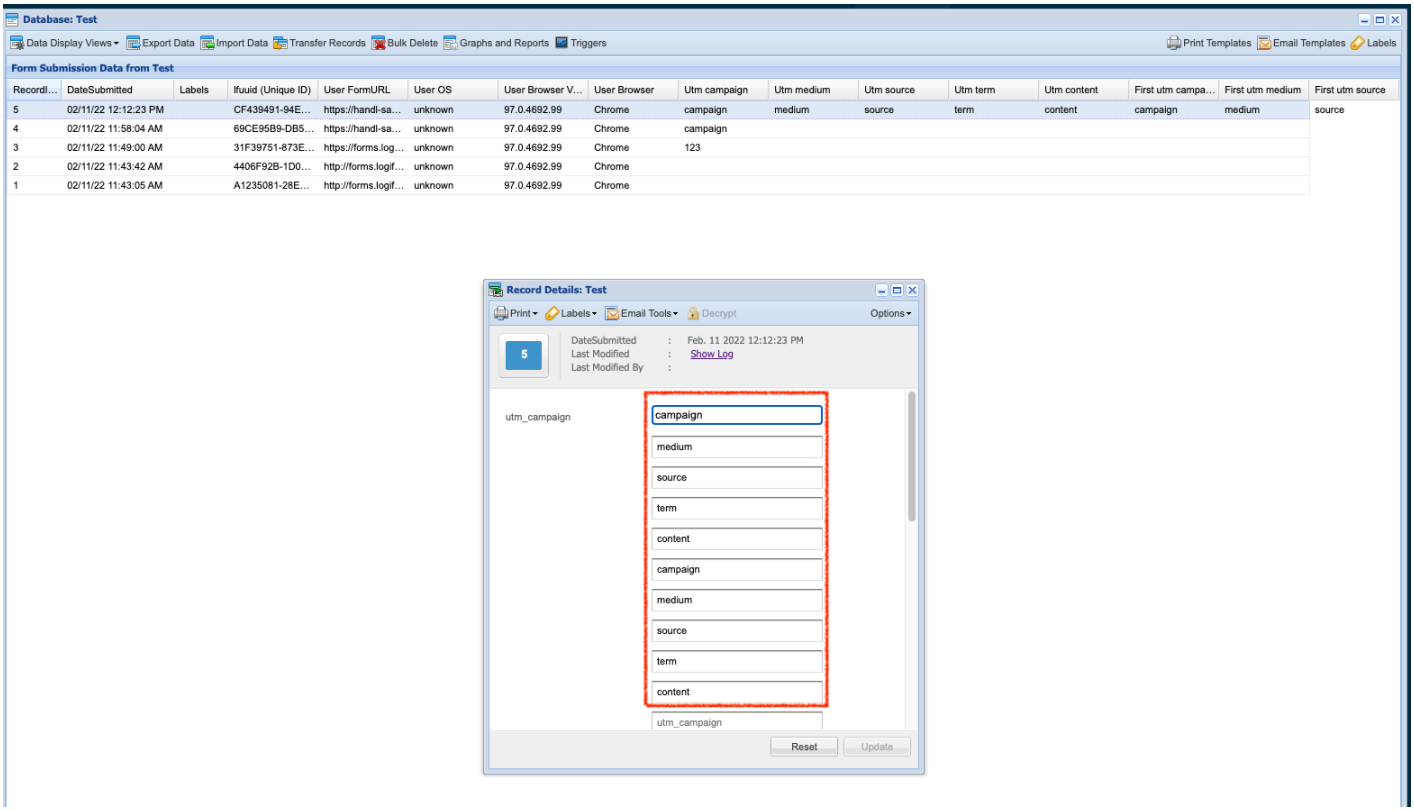

After you embed, it will look like this

Logiforms

Now you can test it...

If everything went well, you should see the UTMs, traffic source and all the other parameters in the backend.
