

Nex Forms Integration

HandL UTM Grabber / Tracker integration within Nex Forms

- [Nex Forms Implementation](#)

Nex Forms Implementation

HandL UTM Grabber works with Nex Forms with very easy setup.

Create the hidden fields as shown in the image and make sure the **Input Names** are matching the HandL UTM Grabber's parameter name. See the full list of the parameters you can use [here](#).

The screenshot displays the Nex Forms editor interface. On the left, a sidebar contains navigation links: Dashboard, Posts, Media, Pages, Comments, NEX-Forms (active), Appearance, Plugins, Users, Tools, Settings, UTM, and Collapse menu. The main workspace shows a form with a text input field labeled '*Email' and a hidden input field below it. The 'Edit Field' panel on the right is open, showing the 'INPUT' tab. The 'Input Name' field is highlighted with a red box and contains the text 'utm_campaign'. Other fields in the panel include 'Input Placeholder', 'Input ID', 'Default value & Input Styling', 'Input Size', 'Corners', 'Disabled', 'Set icon before', 'Set icon after', and 'BACKGROUND SETTINGS'.
