

OptimizePress Integration

HandL UTM Grabber / Tracker How to collect and track UTM variables via OptimizePress step by step

- [OptimizePress and Infusionsoft Integration](#)
- [OptimizePress Pages \(Enable Scripts & Styles\)](#)

OptimizePress and Infusionsoft Integration

Create custom fields in infusionsoft

Create the custom fields as explained [here](#). You can create one field for each UTM variables and HandL parameters matching the naming convention (it can be any name but it is easier to follow the naming convention for mapping) here [Native WP Shortcodes](#)

We recommend creating a separate tab called "Tracking" and using subheader to separate parameters for better visualization (shown in the image below)

Tracking

UTMs (section header)

↑

gclid (Text)

+

Add a custom field

HandL Parameters (section header)

↓

↑

handl_original_ref (Text)

↓

↑

handl_ip (Text)

+

Add a custom field

+

Add a section header

Add the new custom fields in your form in Campaign

Create the webform as explained here <https://help.infusionsoft.com/help/create-a-web-form> in the Campaign.

Include custom fields as text fields (not hidden - we'll hide them in OptimizePress) using

```
Field snippet
```

section as shown in the image below.

The screenshot displays the OptinMonster editor interface. At the top, there are tabs for 'Design', 'Thank-you Page', 'Settings', and 'Code'. Below these, a toolbar includes options for 'Format', 'Insert', 'Snippets', and 'Field Snippets'. The 'Format' tab is active, showing a rich text editor with various formatting tools. The main workspace shows a form layout with the following fields:

First Name *	<input type="text" value="First Name *"/>
Email *	<input type="text" value="Email *"/>
utm_campaign	<input type="text" value="utm_campaign"/>
utm_source	<input type="text" value="utm_source"/>
utm_medium	<input type="text" value="utm_medium"/>
utm_term	<input type="text" value="utm_term"/>
utm_content	<input type="text" value="utm_content"/>
gclid	<input type="text" value="gclid"/>
handl_original_ref	<input type="text" value="handl_original_ref"/>
handl_ip	<input type="text" value="handl_ip"/>
<input type="button" value="Submit"/>	

Publish the campaign

Create your automation in the campaign and publish the campaign to persist the changes.

Create your optin form in OptimizePress and Select Integration as "Infusionsoft"

Shown in the image below

Select Integration

[Add New Integration](#)

Select autoresponder or email service provider you want to send your form data to

(Default) Email

Infusionsoft

Webhook

Zapier

Next Step

Select tag and form in Action

List, Tag and Webhook Settings

[Refresh](#)

Integrate your form with Infusionsoft. Choose a tag to apply when this subscriber is added. You can also use the fields from a form, but we will not submit the data through this form. [Read our Infusionsoft tutorial here](#)

Apply Tag

Demo Tag

Use fields from this form

Demo Form

Go Back

Next Step

Select all the custom fields

Form Fields

Choose your form fields

<input checked="" type="checkbox"/> First Name *	<input type="checkbox"/> Last Name	<input checked="" type="checkbox"/> Email *	<input checked="" type="checkbox"/> <input type="checkbox"/> inf_form_xid
<input checked="" type="checkbox"/> <input type="checkbox"/> inf_form_name	<input checked="" type="checkbox"/> <input type="checkbox"/> infusionsoft_version	<input type="checkbox"/> Phone Number	<input type="checkbox"/> utm_campaign
<input type="checkbox"/> utm_source	<input type="checkbox"/> utm_medium	<input type="checkbox"/> utm_term	<input type="checkbox"/> utm_content
<input type="checkbox"/> gclid	<input type="checkbox"/> handl_original_ref	<input type="checkbox"/> handl_ip	

☒ Fields are required for this integration to work.

☐ Fields will not be shown.

Go Back

Next Step

and click next until complete

Select Optin Form > Settings > Advanced Options

Mark the fields as invisible, they will disappear in the form visual

Optin Form

handl_ip	

Positioning ▾

Responsive ▾

Animation & Delay ▾

Click each input and > Input Settings > Default Value

Type the corresponding shortcode name for each individual field. You can see the list of

shortcodes available here [Native WP Shortcodes](#)

Below image shows for utm_campaign, similarly you can do it for all the samples.

The image shows a configuration interface for a shortcode. At the top, there's a blue header with the word "Input" and some icons. Below this is a tabbed interface with four tabs: "Label", "Input", "Icon", and "Validation". The "Input" tab is currently selected. Inside the "Input" tab, there are three main sections: "Required" with a toggle switch set to "No", "Default Value" with a text input field containing "[utm_campaign]", and "Placeholder" with a text input field containing "Enter your utm_campaign". Below these sections is a "Width" section with a slider and a numeric input field showing "553.59". At the bottom of the panel, there are three expandable sections: "Input Positioning", "Animation & Delay", and "Advanced", each with a downward arrow icon.

We also recommend adding CSS class for each field as shown below.

Input
