

Spiffy

HandL UTM Grabber / Tracker How to collect and track UTM variables via Spiffy step by step

- [Spiffy Checkout Integration](#)

Spiffy Checkout Integration

Spiffy Checkout integration is very easy.

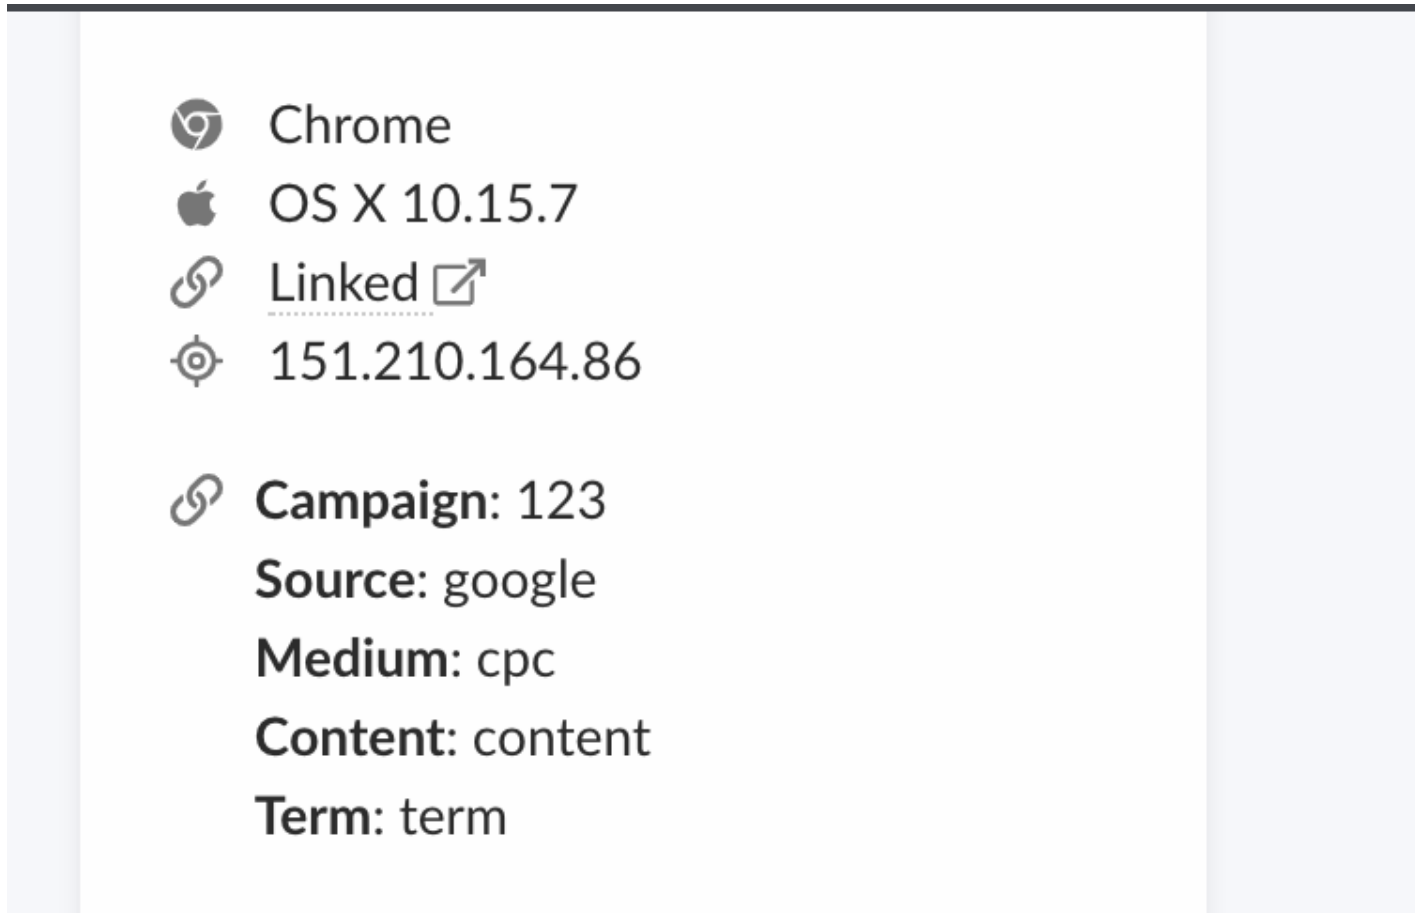

As long as you can pass UTMs to the checkout URL, Spiffy can take them and record automatically as it is explained here <https://help.spiffy.co/article/251-adding-utm-parameters>.

So how can you append all the UTM variables to checkout URL.

It is very easy, simply create your anchor link and add `utm-out` class variable.

```
<a href="https://domain.spiffy.co/checkout/test" class="utm-out" />
```

You can view the UTMs in the Spiffy.

The screenshot shows a list of detected UTM parameters. Each parameter is preceded by a small icon: a circle with a dot for the browser, an Apple logo for the OS, a chain link for the link status, and a target icon for the IP address. Below these, a separate section shows the campaign details with a chain link icon.

-  Chrome
-  OS X 10.15.7
-  Linked 
-  151.210.164.86

-  **Campaign:** 123
- Source:** google
- Medium:** cpc
- Content:** content
- Term:** term

You can pass UTMs using the integrations as well such as Zapier.
